FLEX SEALING
TECHNOLOGY

THE NEW P-SERIES

The robust flashlights of the P-series offer enormous performance. Externally reduced to the essentials, they come with many useful technologies, e. g. the patented Advanced Focus System or the advanced Smart Light Technology for individual programmability.

THE ROBUST MODELS

Lighting for professionals at work. These extra robust, handy, chemical-resistant models are suitable for various work environments thanks to constant and color-neutral light.

THE EVERYDAY MODELS

New classics for every day. The lamps captivate through innovative technologies as well as an excellent price-performance ratio.

THE HIGH-TECH MODELS

These premium lamps are designed for the most demanding of outdoor enthusiasts. It is characterized by numerous technical features, a high level of robustness thanks to hard anodizing.

QUALITY GUARANTEED

GERMAN ENGINEERING & DESIGN

To us, "German Engineering & Design" is not just an empty phrase - it means the highest expectations in technology, design, innovation, materials, workmanship and sustainability. We hold more than 100 industrial property rights. These include patents, utility models, and designs. Furthermore, we are proud of having received various design awards for our products.

Since we are confident in the quality of our lights, virtually all of our products are covered by a two-year warranty* - but there's more: Upon product registration, our customers have the option of extending the warranty to seven years.

The information pertaining to package contents, appearance, performance, dimensions and weight corresponds to the information available at the time of publication. In the interest of product development, we reserve the right to change package contents, appearance, design and color without prior notice. Product images may vary from the actual products and may show optional accessories which can be purchased separately. Errors and misprints excepted.

- 1) Measurements according to ANSI FL1 on the respective setting. If no setting is explicitly indicated, the values refer to luminous flux (Lumen/lm) and beam distance (meters/m) on the highest setting and to the run time (hours/h) on the lowest setting. If the light is equipped with color LED(s), the measurements indicated apply to white light or white LED. A boost function (if applicable) can be used several times, but only for short periods of time. If the light has different energy modes, measurement is based on "energy saving mode."
- 2) Calculated capacity value in watt-hours (Wh) or milliampere hours (mAh). This applies to the delivery state of the battery/ies inside the respective item, or for lights with rechargeable battery/ies, to the rechargeable battery/ies inside the product when fully charged.
- 3) Charging time may vary by power supply.

*1) Two year warranty from the date of purchase, or seven years with online registration through our website. For more information visit [ledlenser.my/service/warranty](https://www.ledlenser.my/service/warranty)
